WHAT IS AUGMENTED REALITY?

QR Codes

A QR Code is scanned by a phone or a device with a QR reader loaded.

The code will link to multimedia such as images, video, or audio or connect users to a web resource.

Augmented Reality

Sometimes a special target is scanned to activate AR, other times an everyday object can be used.

AR augments or changes something in the real-world and makes it appear differently.

Virtual Reality

A QR Code is scanned by a phone or a device with a QR reader loaded.

The code will link to multimedia such as images, video, or audio or connect users to a web resource.

AUGMENTED REALITY IS FUN, BUT IN THE CLASSROOM:

Let students engage
and explore with
Augmented Reality.

ALways connect
your Learning
activities to
your standards!

Try out all
apps and
activities
before
using with
your
students.
